

Ora Elite 29"

# Ora Elite Winning Number Displays

The Ora Elite 29" and 32" portrait displays are suitable for Roulette and Sic Bo games and can be customised to fit a casino's individual style with various colour finishes including silver, gold and black.

Ora Elite 32"

## Features & Benefits

Suitable for Roulette and Sic Bo

Double-sided screens to attract more players to a table and increase marketing potential

Provides accurate real-time game information and statistics

Graphics and animations can be configured using winning numbers, stats, advertising content and video

Can be customised to fit your casino's individual style with various colour finishes including silver, gold and black

Multiple skin options

Simple installation and easy to operate

Standalone or networked for centrally controlled graphic content with media scheduling and streaming

Optional toppers including security cameras or a 10" promotional display

## Eye-Catching Visuals

High-impact graphics can be configured through the Dynamic Display System. This allows a plethora of variable graphics and animations to be configured in numerous combinations allowing winning numbers, stats, advertising content and video to be displayed exactly how the operator requires.

## Draw Attention with Ora Elite

The Ora Elite displays are the ideal portrait display for your casino presenting high-impact winning number sequences in either a single or double-sided display. With excellent visibility and striking graphics, this display is bound to attract and retain player attention in any gaming environment.

## Customise to suit your requirements

The Ora Elite displays can be customised to fit your casino's individual style with various colour finishes including gold and black. Ora Elite's on-screen graphic content can be tailored to suit a casino's individual requirements, allowing for customisation. The Ora Elite 32" is compatible with Dynamic Display System for greater graphical control and management and the 29" is compatible with the ADC system. See details below.

## ADC Display System

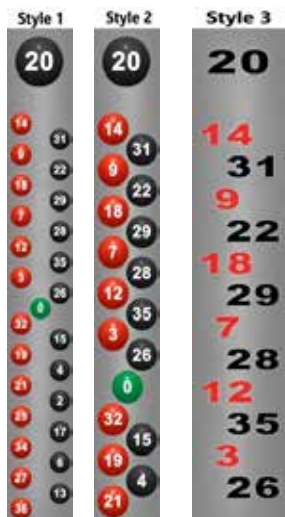

The ADC (Android Control Unit) Display System is a software compatible with portrait displays that enables the configuration of high-impact graphics.

Operators will be provided with a keypad that enables them to make configurations on the display. There are numerous options available including custom backgrounds, logos and ticket text.

Table name, minimum & maximum can be easily changed via settings in the menu, during operation.

Certain configuration options will need to be determined prior to installation. For more information, please contact your local sales team.

Results History Stack can be configured to one of three styles.

Min, Max values can be disabled / enabled and moved around the display to fit with an operator's requirements.

Option to add company logo.

Media player can play any .MP4 video that is 1280 x 960px. Otherwise the default option is a single 0 wheel.

### Additional Information:

- Option to apply custom backgrounds, colour themes and table closed signs.
- Table name, minimum & maximum can be easily changed via settings in the menu, during operation.
- "Good luck" & "No More Bets" animations are only available in English, Spanish and French.
- Compatible with all currencies.

Ticker text can added as a single line or a cycling list of statements. Otherwise the default option is no message.

## Dynamic Display System - Default Skins

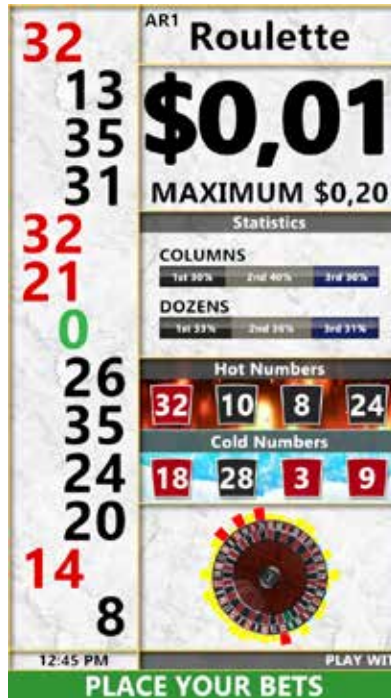

The Dynamic Display System is set up with a default standard set of five display skins that provide a wide variety of themes / styles to suit any casino's requirements.

It is also possible to have custom skins designed and this service is available at an extra cost. For more information, please contact your local sales team.
