Supernova

Supernova is a Progressive Game Jackpot System that is designed to supercharge the fun and excitement on any live table game across a casino floor. The system is fully customisable providing operators with the flexibility to configure multiple customised progressive jackpots and patented mystery prizes, to enhance any base game.

By offering this unique and innovative product, Supernova can help your casino to stand out from the crowd.
Features & Benefits

Creates huge excitement around the table and casino floor

Offers players the chance to win big payouts whilst still playing the base game

Drives increased revenue

Independent meters keep players at tables and builds anticipation

White Label product - easily customisable contributions, hit frequency, jackpots and design

Secure, proven, reliable and automated system

Minimum dealer interaction required

Creates huge excitement around the table and casino floor

Players have access to a variety of individual, community, and mystery progressive jackpots as well as fixed pay-outs

The Jackpot, display, table layout and Jackpot meters can all be customized to a casino's own design

Easy-to-use and set-up with Bet Sensors, Controller a Table Display and a Dealer Console, which will then connect to a server

*Some bonusing games may be restricted contrary to permitting jurisdictions

Unlimited Choice and Flexibility

The Supernova system works on standalone tables or by linking multiple gaming tables together to create a network of tables. The Jackpot, display, table layout and Jackpot meters can all then be customised to a casino's own design.

Players have the chance to win progressive jackpots and a range of other bonuses. Supernova, meters can also be set independently. So, if one jackpot is won, the others remain in play (and don't reset) until they are also won. This means players have more chances of winning a big prize, even if it's not the top jackpot.

Increased Excitement for Players

A key feature unique to the Supernova System allows players to have access to a variety of individual, community, and mystery progressive jackpots as well as fixed pay-outs.

This increased chance of winning excites players as more achievable game outcomes, such as lower valued hands in Poker, can end up being worth the most. For example, if you win a Royal Flush in Poker, the Straight Flush Jackpot will not decrease in value and may possibly have a bigger jackpot than the Royal Flush reset value.

The more players who participate, the larger the potential jackpots become. This can create a real sense of excitement amongst players, as they all have a chance of winning a life-changing amount of money.

Patented Mystery Jackpots

Patented mystery jackpots that use a random number generator (RNG) to select a participating player or multiple players as winners can be added for further excitement and entertainment.

Mystery Jackpots are an effective way to encourage additional player participation and create an air of intrigue throughout a casino. Operators can control the average value and frequency of their mystery jackpots and Jackpots can also be set the same floor-wide across tables and games. This option can be enabled or disabled depending on regional regulatory restrictions.

Customisable Games

Operators can now focus their branding by customising their games and graphics. This can be achieved by utilising existing base games and side bets or by developing brand specific games and side bets.

This provides games that encourage brand loyalty and exclusivity. There is also the option to choose from an existing portfolio of progressives, which can then be modified to individual requirements if required. Our experienced teams can assist with this and help to design a truly unique game.

Product Specifications

System Requirements	Requires a dedicated central server (virtual or physical).
